

COP4424 Project Report

PhotoTell

The first idea of this Project came from the lack of platforms that connects all the photographers on the World. And as person I love photography. I wanted a platform where people can learn about photography and share their experiences. At that point, I felt the need I feel for stories those have been lived. So the idea was simple. Choose your photos and write your story, then share it with the rest of World.

As first thing I designed a wireframe for knowing how the UI should look.

There was the home page where stories of the people you follow would seem. And to keep people continue to learn about photography, there were news and reviews pages. Profile part was going to be at the right-end at every page.

But, things did not go as I imagined. When I started to code the Project I realized that I needed months to complete this Project. So, I decided do a prototype version of this Project. The prototype was going to include UI and just posting a story. At that stage my lack of skills came forward and told me that I can't finish this Project. This was the last week before deadline. And I could not. Instead of what I thought of, I did something different and if I did the prototype I planned it would be better than this thing at any circumstance. At least I would have followed my dream.

So, the new Project does not work. It's buttons does not work and I could not even connect a contact form with the database. But, here are the screenshots of the website.

Stories

Longest wait for a seagull on a ferry.

News

*I shot the 3 photos on the stories part.

News

Ara Güler Museum is opened in Bomonti, Istanbul.

Leica just announced it's new camera.

Nikon's brand new fisheye lens is on markets.

Reviews

Ricoh Kr-10 X

The KR-10x is an SLR for 35mm film from Ricoh which accepts K mount lenses. In some markets the same model is labeled XR-10.

*The camera on the reviews part is the camera I used to shot the first photo on the stories part.

Reviews

Ricoh Kr-10 X

The KR-10x is an SLR for 35mm film from Ricoh which accepts K mount lenses. In some markets the same model is labeled XR-10.

This camera is based around an electronically-timed shutter, which needs two 1.5 volt LR44/SR44 type batteries to operate; it provides both aperture-priority autoexposure and a wide range of manual shutter speeds (1/1000 sec. to 16 seconds) plus flash sync up to 1/125th.

I know that a Project report should not be like this. But, I wanted to tell my story.
